

Logzilla

“A solution that will eat up your logs like Godzilla, and will then talk to you about it”

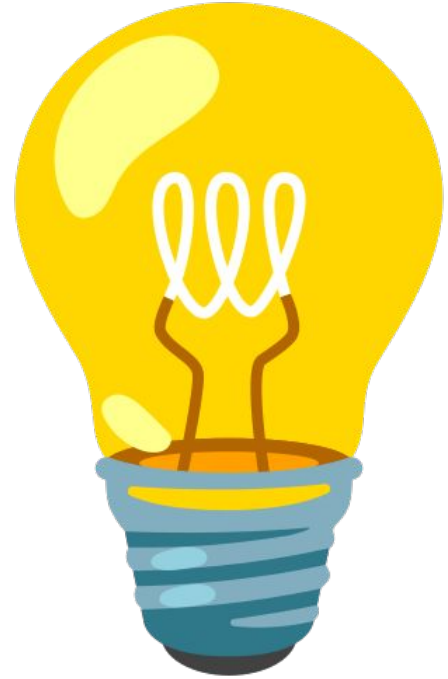

Problem

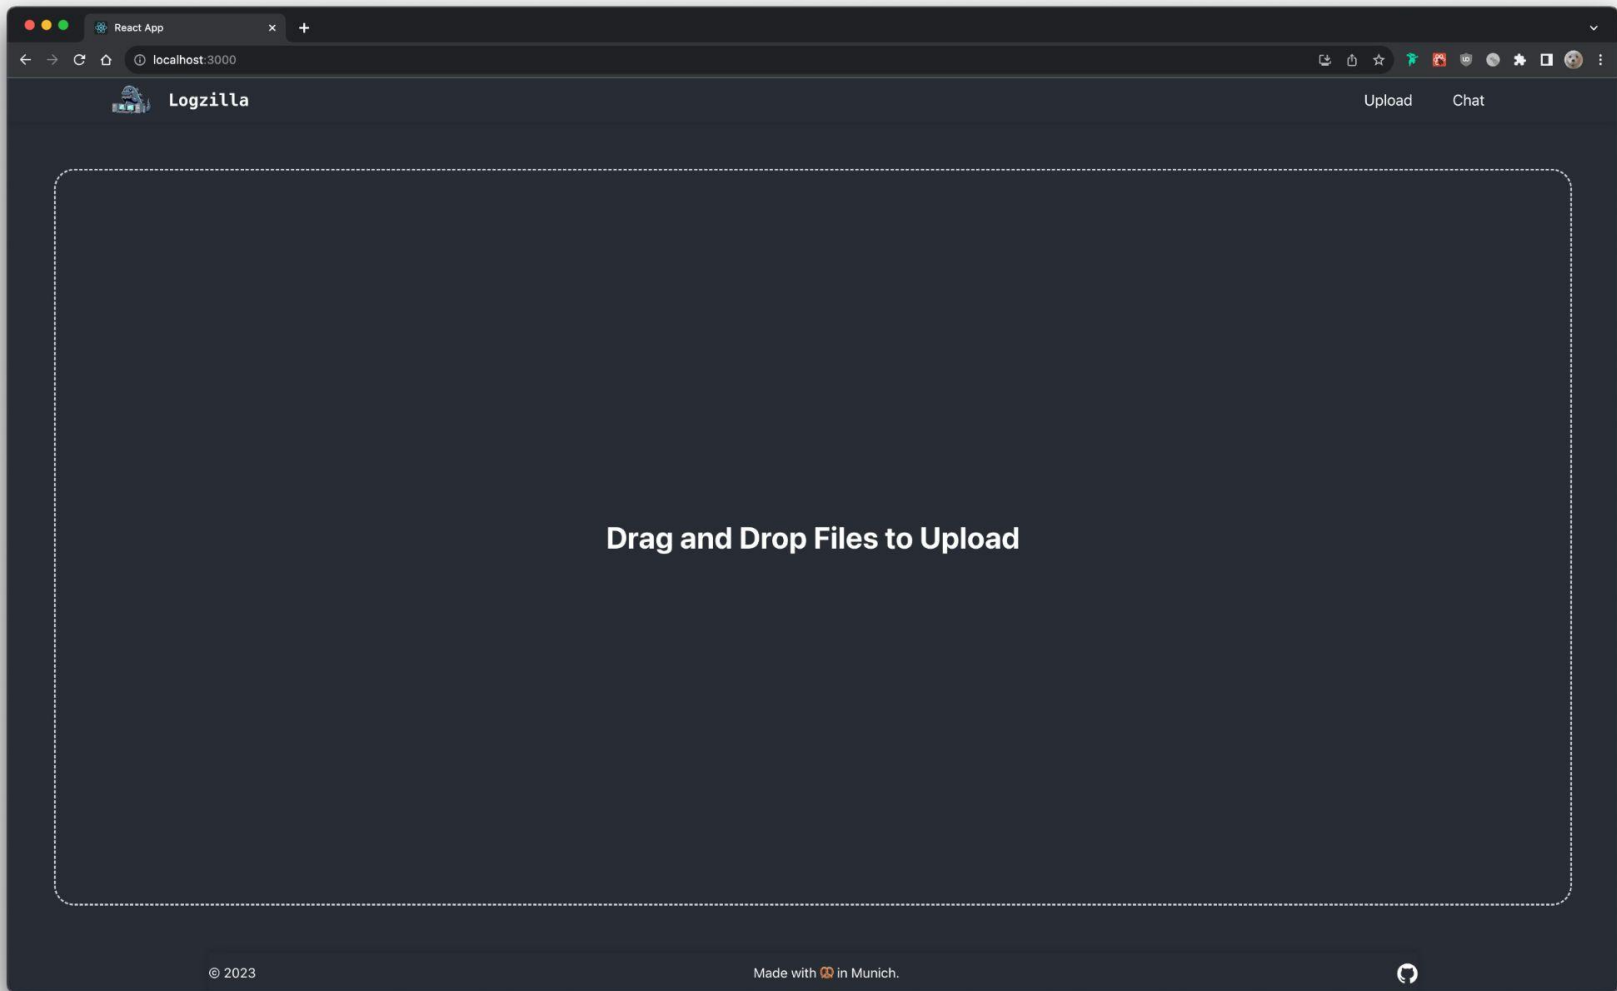

- **Ever-growing** number and length of log files
- Responsible humans are **overwhelmed**
- Valuable insights being **lost**

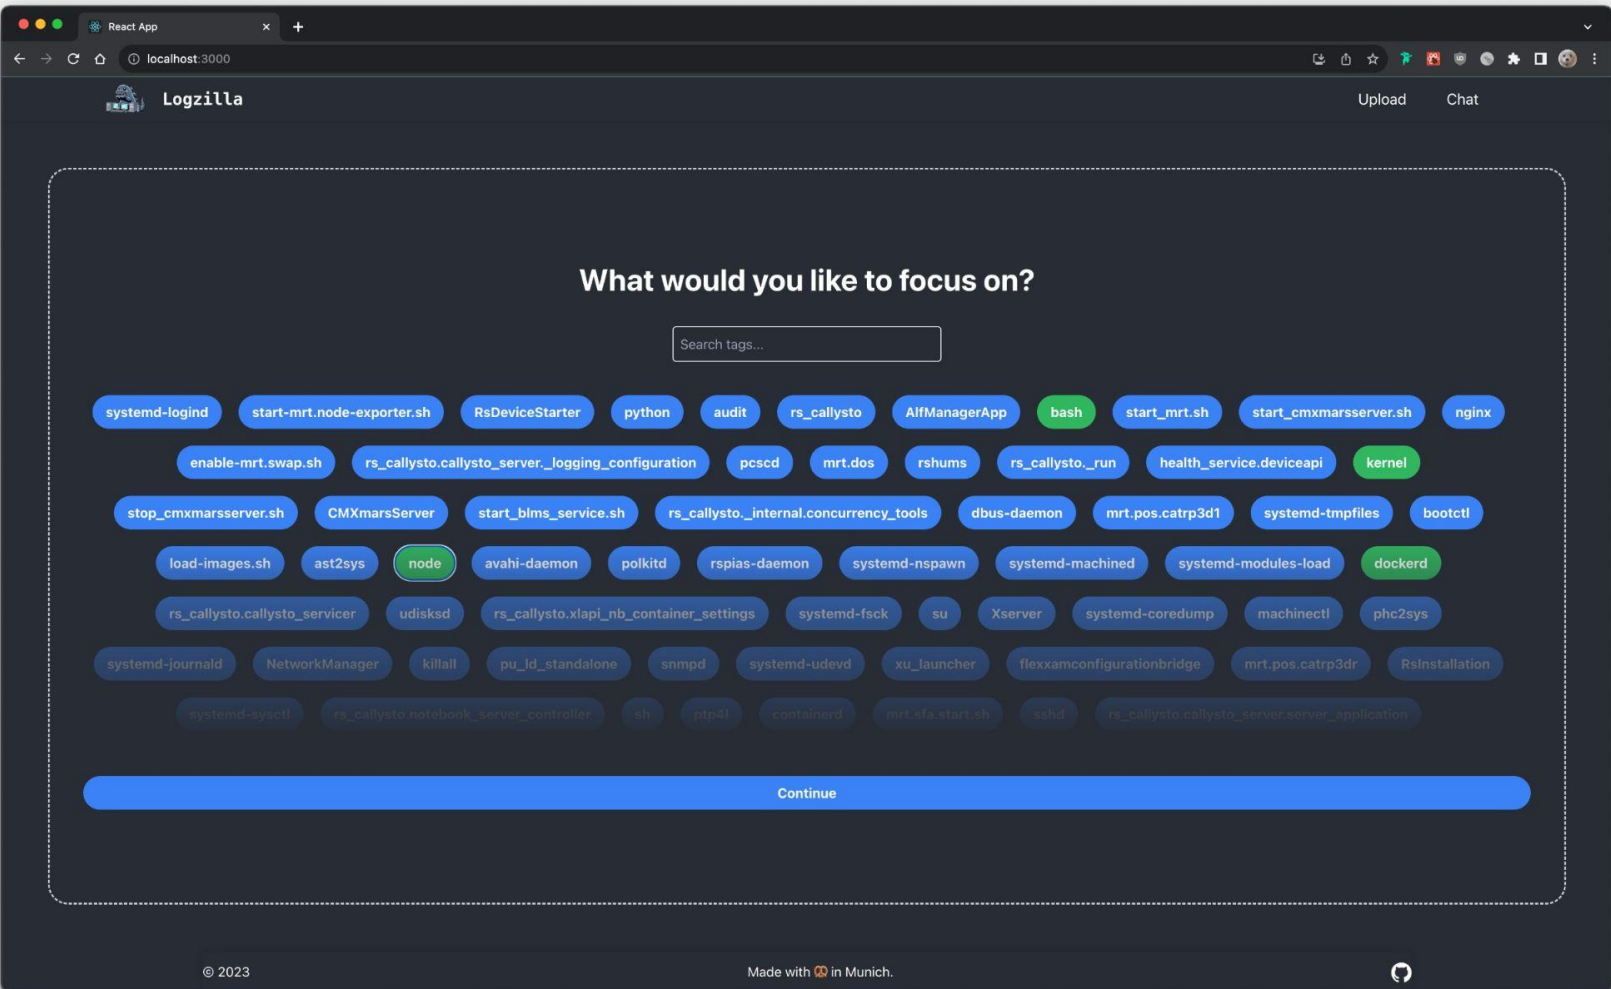

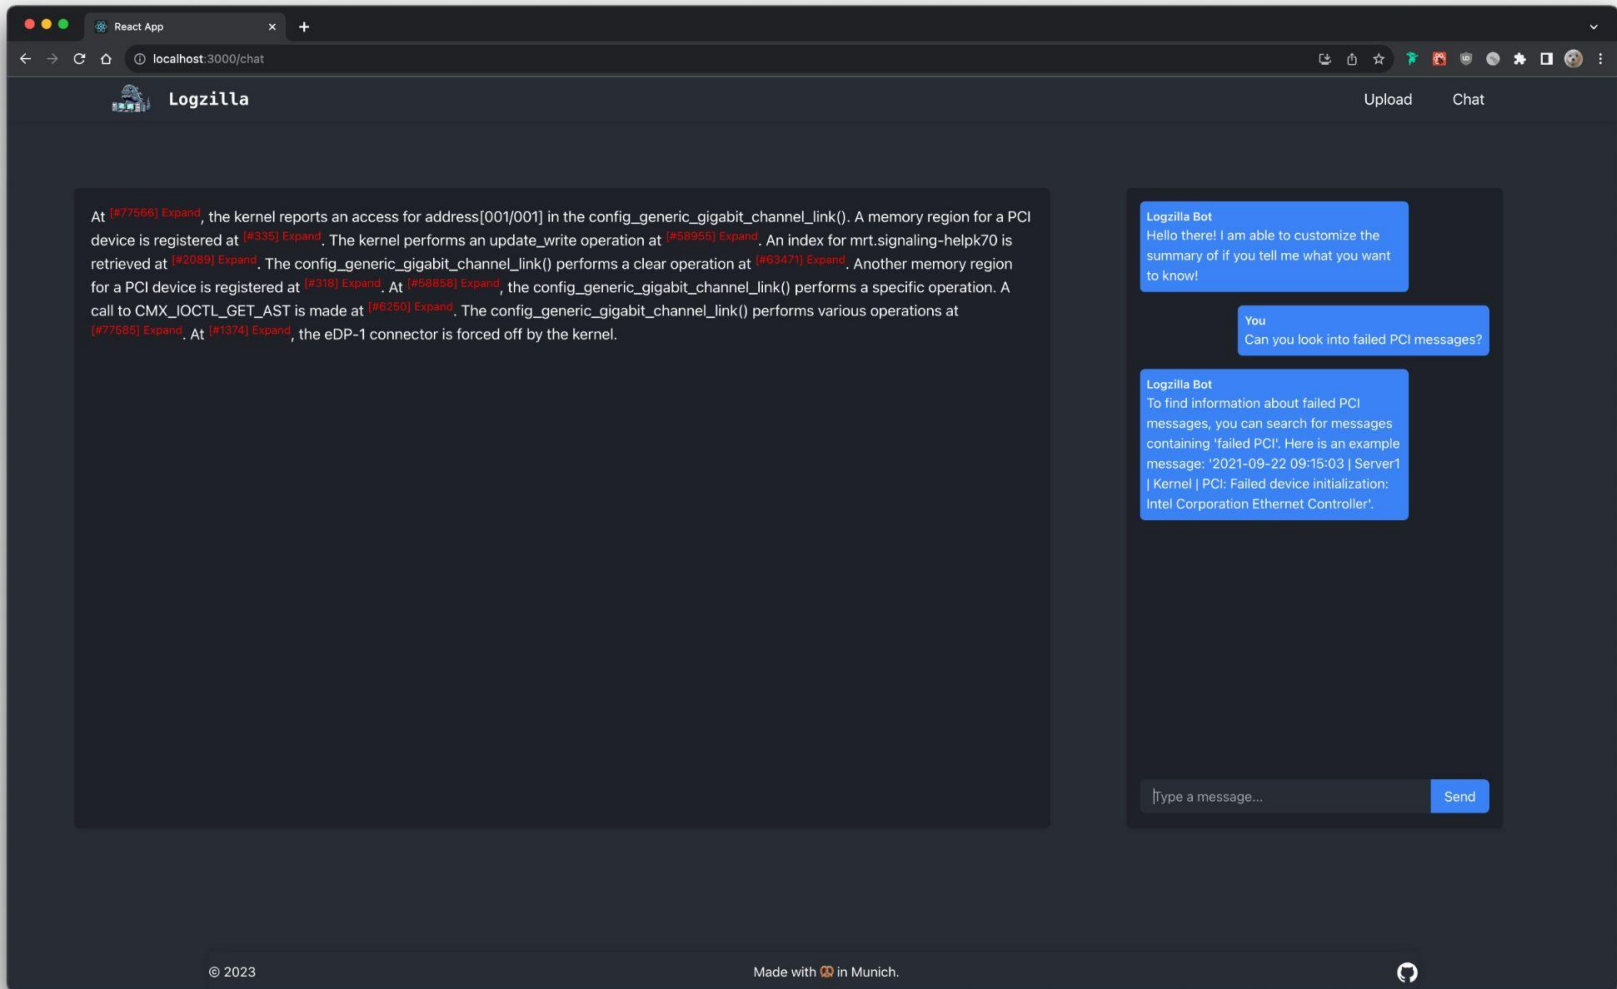

Solution

- **Dynamic summary** based on user interaction and interest
- **Filtering and retrieval** of relevant log entries
- **Explanation** of returned results

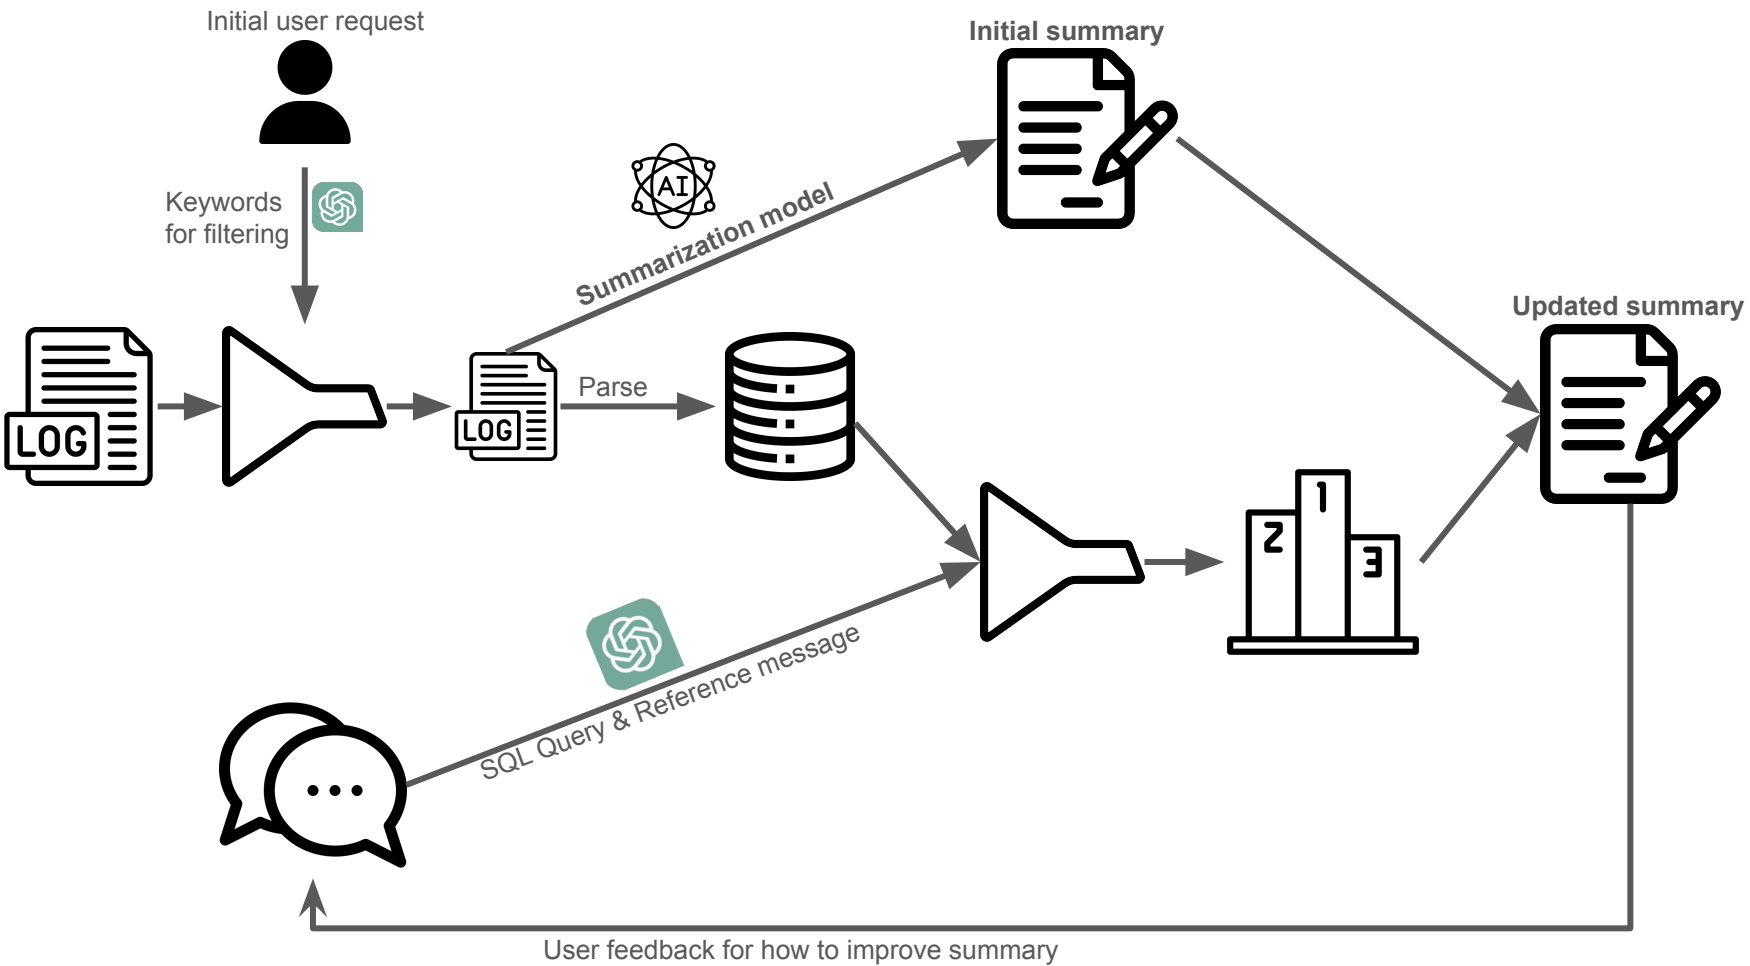

How does it work?

Thank you!
